

Kids, Cops and Computers
By: Reanna R.

I am very grateful to have the opportunity of getting a computer and it really made a difference in the way I work at school. It helped me to research new things and explore further more into the internet. I realized then that there is so much to learn and I could investigate all these things right on the computer.

This year being in grade seven there are those projects and assignments to do and with this computer I have the technology on my side which gives me the chance to do further more on the research part but also there are those programs on the computer that I get to use including power point, movie maker, Microsoft word and more. All of these resources helped to achieve much more than I thought I could with the work in school.

A good example of what I accomplished with this computer was a science project on the unit of structure strength and stability. Our project that we had to do was based on the topic of shell structures. For any kind of science projects there are the few steps to do to end with a good finished product and this could be all done alone with the computer. I explored the web to find the knowledge I would need about shell structures and found many interesting facts also I had the chance of using power point to give a good presentation. Overall the mark I received was pretty good.

Knowing that the future eventually will be constructed by the work of technology it is nice to know that I have a slight advantage since I have a computer and I am able to attend these programs learning about them. Now if I have technology taken from me I would not be able to live the same way.
